

Mitchell van Rijswijk

University of Applied Sciences ICT student, specialized in software development, with a strong interest in the intersection between tech and society. Experienced in building full-stack applications that solve real-world problems. Currently looking for a graduation internship where I can make technical solutions with impact that have a positive effect on society.

Education

Sep 2022 – Present	HBO-ICT, Software Development HAN University of Applied Sciences Arnhem, Netherlands
Sep 2019 – Jul 2022	Informatics, Software Engineering University of Applied Sciences Leiden Leiden, Netherlands
Sep 2018 – Feb 2019	Computer Science and Engineering TU Delft Delft, Netherlands

Internships

Apr 2025 – Oct 2025

OpenValue

During my internship at OpenValue I independently developed an application with which the marketing department could automatically generate highlight clips from video recordings of presentations held by the company. This tool makes it possible to efficiently convert these recordings to short-form content for use on social media. Now that the marketing department is being expanded, the application is being put to use to increase the visibility of the company in the quickly changing landscape of social media.

Sep 2024 – Feb 2025

Alliander N.V.

During my internship at Alliander N.V. I was part of the team Maintenance & Management. In this team I worked on the development of analytical tools for detecting malfunctions in the energy network. Additionally, I made an important contribution on improving the security of 28 applications managed by the team. By using a standardized Docker base image, I was able to reduce the number of vulnerabilities per project from hundreds to a few.
